About LMR EA 2640

The LMR laboratory was set up in 1990 and is recognized as an “Equipe d’Accueil” EA 2640 at the University François Rabelais de Tours since 1998. It represents about 30 persons. LMR is particularly dedicated to the “characterization of materials and dynamics of structures”. The staff covers a wide spectrum of scientific and engineering disciplines, which can be broken down as follows: Mechanical behavior of bulk materials (metals and polymers) and surfaces – modeling, Study and resolution of mechanical problems coupled and multi physics phenomena, thermo mechanics, Adhesion, Rheology, Resolution algorithms, Grid Computing, Tribology, Corrosion, Fatigue of materials, Multi scales approaches (involving micro structural evolutions), Damage Mechanisms. This laboratory has created two applied research centers (CEROC and CERMEL) thanks to their industrial partners and the local and territorial administration.

Abstract & Paper submission

Please submit an extended abstract of 2 pages reporting research motivations, methods and results by May 31st, 2015. The authors will be informed about the status of their papers by September 30th, 2015. All received manuscripts will be reviewed by the scientific committee. Accepted papers will be published in the international journals “Rubber Chemistry and Technology” and “KGK–Kautschuk Gummi Kunststoffe”. (Guidelines for writing abstracts and manuscripts are available at the conference website).

About Tours

The City of Tours is an important crossroads in central France, located at the heart of a European communication network. The TGV high speed train puts Tours at only 55 minutes from the centre of Paris, and allows direct connections to all the major airports. It's the chief town of the Loire Valley considered as the garden of France. With more than 360,000 residents (with the suburbs), Tours is renowned for its wines and for the perfection of its local spoken French and its “art de vivre”. Tours is also famous for its original medieval district, called "le Vieux Tours" and attracts many tourists with the famous royal castles around. Today, Tours is a modern, lively and dynamic city; with a thriving university, cultivating economic development, still young at heart with many cultural and sports activities.

Dates and Deadlines

Abstract submission: September 8th, 2015
Abstract acceptance: September 30th, 2015
Conference early registration: October 21st, 2015
Manuscript submission: November 30th, 2015
Conference date: November 3rd-5th, 2015

Conference Fee*

Fax: +33 (0) 2 47 36 11 11
Email: lmr@univ-tours.fr
Website: http://elastomers2015.sciencesconf.org/
**Conference Scope**

Elastomers, both natural and synthetic, are being used more and more in key industries, like automobile, aircraft, industries, domestic and medical applications and new electronic applications.

The technology involved in the elaboration of elastomers are going through substantial changes as regards to environmental considerations, the availability of raw materials and sustainable development requirements. Moreover the stringent demands in material performances call for the sophisticated testing and analysis of test results.

The present conference, held for the first time in France, follows the series of conferences held in Poland every two years since 1985. The chairman of the conference are Pr. M. Ranganathan and Pr. D. Bielinski

**Conference Topics**

- Physics, chemistry and modification of elastomers
- Raw materials used in rubber technology
- Life cycle and durability of rubber
- Recycling and valorization of rubber waste
- Elastomer composites and their properties
- Dynamic properties and fatigue of rubber
- Modeling aspects
- Compounding and processing
- Testing of raw materials and rubber products
- Testing equipment and machinery

**Local Organising Committee**

N. Benyagoub, G. Berton, F. Chalon, C. Cruanes, MP. Deffarges, A. Dos Santos, M. Hosseini, F. Lacroix, L. Lecroisey, G. Le Quilliec, S. Meo, N. Ranganathan, C. Richard, S. Segghar, C. Valantin, University François Rabelais of Tours, Polytech Tours, LMR EA 2640

**Scientific Committee**

Bai, Ecole Centrale de Paris, France
E. Bayraktar, Supméca Paris, France
D. Bielinski, Lodz University of Technology / IMPiB, Poland
N. Billon, Mines - Paris Tech, France
A. Blume, University of Twente, NL/Degussa, Germany
J. J. Busfield, Queen Mary, University of London, UK
A. Chapman, Tun Abdul Razak Lab., UK
W. Dierkes, University of Twente, The Netherlands
A. Fatemi, University of Toledo, USA
U. Giese, DIK, Germany
J.L. Halary, ESPCI - Paris Tech, France
A. Hamerski, Vipal, Brazil
G. Heinrich, TU Dresden/Leibnitz Inst., Germany
B. Huneau, Ecole Centrale de Nantes, France
B. Le Rossignol, Hutchinson SA, France
A. Lion, Universität der Bundeswehr München, Germany
W. V. Mars, Endurica LLC, USA
Y. Marco, ENSTA Bretagne, France
Y. Nadot, ENSMA de Poitiers, Institut Pprime, France
M. Nait Abdelazziz, University of Lille, Polytech Lille, France
J. Noordermer, University of Twente, The Netherlands
J-P. Quesel, Michelin, France
N. Ranganathan, University of Tours, Polytech Tours, France
K. Ravi Chandran, Anna University, India
S. Reese, Aachen University, Germany
E. Kicko-Walczak, Institute IMPiB, Poland
D. Rodrigues, Université Laval, Canada
Z. Roslaniec, West Pomerania University of Technology, Poland
L. Slusarski, IMPiB, Poland
M. Zaborski, Lodz University of Technology, Poland
G. Zaikov, Russian Acad. Sci., Russia
